

UI / UX Specification

Student OS Documentation — File 04

Design Goal

Create a premium, calm, student-focused SaaS interface that is information-dense without feeling crowded.

Global Layout

Desktop: persistent sidebar + top header + responsive content area.

Mobile: bottom navigation with More for secondary modules.

Use consistent page title, description, actions and content sections.

Maintain consistent spacing, card hierarchy and visual grouping.

Pages

Home

- Greeting, notification count, summary cards, next class, today schedule, upcoming tasks/exams/events and analytics.

Today

- Date navigation, timeline, tasks and reminders.

Timetable

- Week selector, timetable grid, day details, add/edit controls.

Calendar

- Month navigation, event markers, date detail panel.

Tasks

- Filters, search, task list/table, create/edit modal or page, completion interaction.

Attendance

- Overall summary, subject cards/table, charts, target/warning state.

Exams

- Upcoming exam cards/table, countdown, syllabus, preparation progress.

Notes

- Subject navigation, note list, editor, attachments and search.

Notifications

- Unread indicator, filters, notification list and preferences.

Profile/Settings

- Profile information and categorized preferences.

Interaction States

Loading skeletons for data-heavy sections.

Empty state with explanation and primary action.

Error state with retry option where possible.

Success feedback for mutations.

Confirmation for destructive actions.

Disabled state while an operation is processing.

Responsive Rules

Do not rely on horizontal scrolling for core mobile workflows.

Tables transform into cards or controlled horizontal layouts when needed.

Charts resize while preserving readable labels.

Primary actions remain reachable on small screens.

Accessibility

Semantic HTML, labels, keyboard navigation, visible focus, sufficient contrast, meaningful button labels and accessible chart summaries.

Motion

Use subtle transitions for navigation, dialogs, cards and state changes. Avoid animation that delays task completion.
