

Design System Specification

Student OS Documentation — File 05

Principles

Consistency, clarity, accessibility, responsive behavior, reusable components and restrained visual effects.

Tokens

Define centralized color tokens for background, surface, text, border, primary, success, warning, danger and info.

Define typography scale, font weights, line heights and heading hierarchy.

Define spacing scale and container widths.

Define border radius, shadows and elevation levels.

Define z-index/layer rules for navigation, dialogs, popovers and notifications.

Core Components

Button

Icon Button

Input

Textarea

Select

Checkbox

Switch

Date/Time Picker

Card

Badge

Tabs

Dropdown

Modal/Dialog

Drawer

Tooltip

Toast

Table

Pagination

Progress

Skeleton

Alert

Empty State

Charts

Standardize chart margins, tooltip behavior, labels, legends, responsive sizing and accessible summaries.

Dark Mode

All semantic tokens must have light/dark values. Do not hard-code page-specific colors that break themes.

Icons

Use a consistent open-source icon library such as Lucide React; avoid mixing unrelated icon styles.

Component Rules

Prefer composition and variants over duplicated components. Keep component APIs predictable and documented.
