Selection Rules

Prefer actively maintained, reputable open-source packages. Verify license compatibility, maintenance health, bundle impact and security before adding a dependency.

Usage Rules

Do not add duplicate libraries for the same job. Wrap third-party functionality behind reusable project components where appropriate.

License Compliance

Keep required license notices/attributions. Do not copy proprietary code or assets without permission.

Dependency Review

Before adding a package, document purpose, version, license, security considerations and where it is used.

Avoid

Unnecessary UI libraries, abandoned packages, duplicate date/chart/form libraries, or dependencies added only for a trivial helper.
